

The Office of State Procurement promotes energy savings with the contracts we help agencies develop and with the contracts we manage.

Some examples are:

- Promote the usage of Energy Star qualified products through State managed and cooperative contracts
- Promote the usage of Energy-efficient lighting solutions through State managed and cooperative contracts
- Recycled paper requirements for Printing solicitations
- The Vehicle contract includes options for fuel-efficiency

The OSP website provides information about contracts to guide agencies, universities and colleges as they plan their energy efficient purchases. The OSP website is a valuable tool for cities, counties, municipalities and school districts as well.

Our website can be found at:

<http://www.dfa.arkansas.gov/offices/procurement/Pages/default.aspx>

The “Be Green” link on OSP’s website leads to more energy related information such as the Arkansas Green Portal, which is a valuable tool to help Arkansan’s find new energy sources and to conserve the ones we already have.
